MEDICAL LIBRARY ASSOCIATION, INC.

AND THE

FRIENDS OF THE ARMY MEDICAL LIBRARY

Washington, D. C.

**THE POLICY OF THE ARMY MEDICAL LIBRARY
IN RESPECT TO
MICROFILMING RESEARCH MATERIAL**

The microfilm work of the Army Medical Library is set up to provide three much needed services: (1) the sending of material of a medical character to members of the Armed Forces in the war theaters; (2) the furnishing of medical research material to our allies to replace that destroyed by enemy action; (3) the giving aid to those engaged in scientific research.

The policy adopted by the Army Medical Library in microfilming this material has been based on the assumption that current research material is of utmost value to medical men in the Armed Services. It is impossible in many areas due to the difficulties of transportation to supply the original article, and microfilm, which can be sent easily by air mail because of its small size, has been substituted.

The work of microfilming falls into three categories:

- (1) The microfilming of single articles from journals or publications. These are made and distributed in this country and abroad as requested. This is done as a regular library service to save the wear and tear of sending the original material through the mails. When such microfilms are made they show the name of the author and the publication in which the article appears so that full credit is given to the publisher and to the author.
- (2) The microfilming of complete medical journals. These are now sent regularly to many installations of the Armed Services in the various theaters of operation. This is the only regular means of getting this information to these medical men on the front lines since difficulties of transportation have made it impossible to send the original journals. Without exception these journals are

(Continued on inside back cover)

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The Subscription price for both is \$5.00 per year in the United States and \$5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at \$1.00 per year. distributed abroad and none is sent to any installation in the western hemisphere. The South American area is specifically not included in the distribution of microfilms of medical journals.

(3) The microfilms of published books. Rarely is there a request for microfilm of a published book by installations of the Armed Forces abroad. When such a request is made the permission of the publisher is obtained in each case before the work is done. Complete journals or books covered by copyright are not filmed for domestic use or in any case where the original material is available for purchase.

In view of the fact that the Army Medical Library is a war agency, it is expected that requests for microfilms will be kept to an absolute minimum by every individual using the service. The Library reserves the right to scrutinize each request, taking into consideration the number of items included and the availability of the material in libraries accessible to the reader.

The following priorities will be observed in filling requests: Medical Corps of the Armed Forces; Government libraries; research institutions and libraries; private individuals; commercial firms.

The microfilm service is considered as an extension of the loan service in that it makes journals, bound and unbound, available to the medical profession everywhere without requiring them to visit Washington or to pay a considerable amount for postage on heavy books mailed as library loans. It also saves wear and tear on important material, much of which is now irreplaceable.
